### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR

1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Zimmerman (Reg. No. 57,993) on July 18, 2007.

### IN THE CLAIMS

Please cancel claims 2-4, 19-21 and 37-44 without prejudice or disclaimer.

Please amend claim claims 1, 13, 15, 22, 23, 24 and 25 as follows:

1. (Currently amended) A method of managing of peer-to-peer network downloads, comprising:

initiating a broadcast search from a client on a peer-to-peer network;

receiving a list of servers that satisfy the search;

comparing a connection speed of at least one of the servers to an available network access bandwidth of the client;

selecting one of a plurality of downloading systems based on the comparison;

determining if an available bandwidth is less than a connection speed to two of the

servers;

when the available bandwidth is less than the connection speed to two of the servers,

selecting a serial concatenated download system;

when the available bandwidth is not less than the connection speed to two of the servers,  
selecting a multiple concurrent download system;

when the available bandwidth is not less than the connection speed to two of the servers,  
selecting a multiple concatenated download system; and

downloading a file using one of the plurality of downloading systems.

13. (Currently Amended) The method of claim 1, wherein receiving the list of servers further comprises:

receiving a source node for the file.

downloading a file using one of the plurality of downloading systems.

15. (Currently Amended) A method of managing peer-to-peer network downloads, comprising:

broadcasting a search query from a client over the peer-to-peer network;

receiving a list of servers and a list of associated document names that satisfy the search query;

comparing a connection speed of at least one of the servers on the list of servers to an available network access bandwidth of the client;

determining one of a plurality of downloading systems based on the comparison;

determining if an available bandwidth is less than a connection speed to two of the servers;

when the available bandwidth is less than the connection speed to two of the servers,  
selecting a serial concatenated download system;

when the available bandwidth is not less than the connection speed to two of the servers,  
selecting a multiple concurrent download system;

Art Unit: 2157

when the available bandwidth is not less than the connection speed to two of the servers,  
selecting a multiple concatenated download system; and  
downloading a file via the one of the plurality of downloading systems.

22. (Currently Amended) The method of claim [[19]] 15, wherein selecting the serial concatenated download system further comprises:

starting a download from one of the list of servers; and  
if the one of the list of servers is interrupted during the download, selecting a second of the list of server to start a download; iii) requesting the download to start at a next byte after a last received byte.

23. (Currently Amended) The method of claim [[20]] 22, wherein selecting the multiple concurrent download system further comprises:

starting a download from at least two of the servers; and  
if any of the at least two of the servers finishes the download, terminating the download for any other servers.

24. (Currently Amended) The method of claim [[21]] 22, wherein selecting the multiple concatenated download system further comprises:

starting a first download at a first byte of the file for one of the at least two servers;  
starting a second download at a second byte of the file for a second of the at least two servers; and

Art Unit: 2157

determining when a complete file has been downloaded by combining the first download and the second download.

25. (Currently Amended) A method of operating a peer-to-peer network comprising the steps of:

initiating a broadcast search from a first peer to the peer-to-peer network;

receiving a list of peer servers that meet a search query;

comparing a connection speed to at least one of the peer servers to an available network access bandwidth of the first peer;

selecting one of a plurality of downloading systems based on the comparison;

determining if an available bandwidth is less than a connection speed to two of the servers;

when the available bandwidth is less than the connection speed to two of the servers,

selecting a serial concatenated download system;

when the available bandwidth is not less than the connection speed to two of the servers,

selecting a multiple concurrent download system;

when the available bandwidth is not less than the connection speed to two of the servers,

selecting a multiple concatenated download system; and

downloading a file using the selected one of the plurality of downloading systems.
